command&control for Air Traffic Management applications

PRODUCTS FOR AIR TRAFFIC MANAGEMENT

command&control for Air Traffic Management applications

The area of Air Traffic Management is predicted to grow at a minimum of the next decade at a very good rate. Therefore, modern and reliable equipment in all areas needs to be implemented into daily operations. Over 20 years now our headsets are used in the Air Traffic Management to command and control flights all over the world - every hour, on every day. We are proud to have build such a solid customer base to be supported with the best possible products for everyone.

Communication is a crucial part for every airport or air traffic centre. A lack of communication or misunderstandings can have serious consequences, especially looking for the growing figures of flights all around the globe.

Our products, especially our AirTalk series, are very well known all around the globe for reliability and comfort and already won prizes. The Push-To-Talk (PTT) buttons have a high ergonomic and stability to endure daily operations. We already have connected to nearly every voice communication system manufacturer and can easily do the correct adjustment for your VCS as well.

The product portfolio is rounded by a variety of supporting products such as accessories like different ear cushions, spacer for a better fitting or USB options for supporting training and simulation szenarios.

We support you as best as we can with our products, knowledge and accessories.

OUR ADVANTAGE - STRONG AND UNIQUE

VARIETY

600+ variants of our products support our customer

CUSTOMIZING

Individual opportunities for customer requests, such as

TECHNOLOGY

Best technology implemented to support reliable communication
